## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Hirst et al.

Hirst et al disclose a fusing device 102 for used in an image forming apparatus to fuse an image receiving medium 120 (Fig. 1) comprising a rotating fuser roller 136 provided as heat pipe 210 including a sealed hollow cavity 306 (Col. 6, line 56) containing a working fluid comprising water for evenly distributing the heat (Col. 6, line 60); a rotating pressure roller 138 for forming a nip with the fuser roller (Fig. 2); and an electrical coil 628 inductively coupled to the fuser roller to inductively heat the fuser roller upon energizing the electrical coil with electrical power (Col. 8, line 33).

Hirst et al further disclose the working fluid is a multiphase fluid including a liquid phase and gas phase (i.e. ethylene glycol, Col. 6, line 63) in equilibrium with one another, the heat pipe has an internal pressure that stiffen against deformation (i.e. the use of copper as a material for the heat pipe, Col. 5, line 52), the fuser roller in the form of a cylindrical tube with capped ends 304 (Col. 6, line 38), the wall of the fuser roller is

made of an electrically conductive material 604 (Col. 8, line 48), a magnetic material 604 (Col. 6, line 38) or a nonconductive having magnetic particles imbedded, the fuser roller having a pressure relief system 408 for over pressurization.
